

Video 293: Q&A Session #93

by Wes Penre, February 19, 2022

The video to this transcript can be found on my video channel: <https://wespenrevideos.com>

This is Wes Penre, and welcome to a new Q&A. Please send more questions to wespenre2@gmail.com and put Q&A in the email subject line, so I don't miss it. Here are today's questions and comments:

QUESTION 1: With all these changes coming to our world with the Metaverse and Elon Musk's "Neuralink" - are these things that "we" (meaning our community) shouldn't fear since it is part of our learning process for going back home. Is the answer as simple as being sovereign, moving to the mountains, and not being involved in the new way of life which will lead to human robots?

MY COMMENT: "Moving up the mountains," as you put it, is one way to do it, or perhaps to delay it. I don't want to be a doom-and-gloom person, but I need to be realistic, or it's of no help to anybody. I think living off the Grid will work, while the EL-ite are busy setting up the Metaverse and the Singularity, but most people in our community have noticed that new laws and regulations are continuously being implemented by governments to restrict our choices of daily living to make our physical world as difficult and scary as possible. Based on research and history, I think they will find ways to get to those, too, who try to avoid their New World Order—the Digital World by living off the Grid. But I could be wrong.

We should not be chronically scared of the future because that will only lower our vibrations, which is counter-productive; but the best solution to the Brave New World is to get seriously educated—there is no way around that. It is crucial! The best way to learn is to be an observer and not put our own biases into the research. This way we can better learn how the EL-ite thinks and what we should watch out for.

Without smartphones, we now can't get a job, or function properly in society, and it will eventually be the same with the Metaverse. Virtual Reality (VR) is much more addictive than heroin, and so is the digital world, in general. People can't go long without their smartphones, or they will get real digital withdrawals. So, if we get to live in a future where the Metaverse is mandatory for our everyday life, we need to have the soul-power to only use it for work or for the moments when we really need it. To counter that toxic environment, we need to spend time in real nature—at least as long as it remains biological! We are Children of Nature, and not of the Digital World. We need to be constantly grounded by being in nature and repeatedly do breathing exercises¹ and apply *The Golden Grounding Cord*² (see URLs in the footnotes of the video transcript).

The EL-ite and their minions are intentionally making the everyday world feeling as dangerous and scary as possible—it's the usual *Problem-Reaction-Solution* formula that has almost always worked on us humans: they present a problem that they created (the virus, for example), people cry to Big Daddy for a solution, so Big Daddy (the El-ite) give us *their* solution to a problem they themselves created, and the solution is vaccines and eventually, Virtual Reality (VR)—a “safer world.” When we humans are isolated because of the so-called “dangerous world outside our homes,” we need to survive in some ways, and that's where VR comes into play. Feeding our bodies and to get life's necessities can be done by A.I. “robots,” who don't need to “breathe in the virus” and can deliver on the doorstep, perhaps in purified, “virus-safe” containers. We are now getting groomed to become narcissistic and to suppress our needs for physical contact. But humans need connection, so the solution is to connect in the virtual world, which then will be the real world.

Despite this, as long as you can, find nature, or just take walks and spend time outside. Stay connected as much as possible. Then, when this lifetime is over, we can leave the Kenoma.

We need to handle this step by step and by staying educated. I don't have all the solutions how to completely avoid the Elite's planned future, so we need to come up with solutions as we go along.

QUESTION 2: Have you any significant success at manifesting or creating your free will? I have not after trying many times. This gives me more rational support for your conclusion of futile resistance.

MY COMMENT: Freewill is basically the ability to make free choices and to take the consequences and the responsibility for the choices we make. In the Expanded Universe outside the Kenoma, we are not restricted by amnesia and extremely high density, so we can see more options when we are creating and making choices. Here, we are limited by the limitation of the 3-D mind. On top of that, we also get restricted by the puppeteers at the top of the food chain; hence, there are not many choices left. So, can we actually say we still have freewill? I would say we still have “will,” but not freewill because our choices are limited. However, the more we wake up to who we are, the more choices we can perceive.

So, freewill is a separate concept from creating, although they overlap. In this gluelike reality, it's very difficult to manifest something physical just by thinking it, if we want it to manifest instantly. Here, it's usually a process. If I imagine something I really want, I get a clear picture of it in my mind, and now it's created in what we call the astral. Then I intend it to manifest for me in the physical world, and after that, I leave it with that. I don't think about *how* I'm going to get it. I have set the energies in motion, and now I just wait for it to happen, and it usually does, sooner or later. That has happened quite a few times for me and is just pure physics—it's following the laws of energy—the Law of Attraction. But if I have resistance to my own creation, it will either complicate things, or it won't manifest. There is already resistance due to the thick density we live in, which creates the delay in the first place. If we add our own resistance to it, we might not get what we want.

QUESTION 3: If I leave the Kenoma, is it advisable to stay in Gaia?

MY COMMENT: I think it depends. The human Gaia Experiment had or has a goal for completion and graduation. When the Aryans/Gaians/the Namlu'u reach that goal, they graduate and return to the upper realm of the 8th Heaven (Orion), and some go to the 9th Heaven, which is the intermediary between Orion and the Pleroma. If ready for it, these souls leave Sophia's Universes and return to the Spirit Realm. So, the question is: can we graduate here in the Kenoma and then bypass Gaia, where we started out? I think we can. There are those, of whom Barbara Marciniak is just one of the sources, saying that by being here, we can learn many times faster than if we evolved somewhere else because of the steep learning curve here. But it's up to us. If we don't graduate, we will probably go back to being part of the Larger Gaia again.

But I need to add that in order to return to the Pleroma, we need to have become quite pure, soul-wise, and completely finished our soul mission. So, it's theoretically possible to do that here, but not likely, for most of us, I think.

QUESTION 4: While you keep repeating in your presentations that after we die and leave this dimension, we'll retain our personalities (egos), the Eastern philosophies of non-duality stress the importance of killing the ego while we're still alive as the prerequisite for achieving the unity with the Divine Consciousness (the Oneness). But we know that this is almost an impossible task for most people who are not into deep meditative practices that involve self-inquiry, so why, do you think, such a push now for this very disputable approach among some spiritual teachers?

MY COMMENT: The spiritual leaders and philosophers who suggest this are, in my opinion, skipping many steps on the way. Although they are not wrong, there is barely anybody (perhaps nobody) here in the Kenoma who has reached a state of being/Gnosis to be able to leave the realms of universes and return directly to the Pleroma, the Spiritual Realm, immediately upon death. The ego is the mind of the soul—it's what makes us be us—it's our individuality that we ourselves have created through our choices (freewill). It's the accumulation of our combined experiences since our souls were created. I would say more or less everybody on Earth needs to keep their ego/soul until they are ready to completely shed it and go back home to the Pleroma in pure Spirit. And, like you suggest, it's very difficult to do here. It's difficult enough to heal ourselves from trauma.

QUESTION 5: I am curious about the subject of reincarnation. You say we repeat the same lives over and over which I agree with. But you've also mentioned that when we die and IF we go through the tunnel of light, our soul gets split into millions of different pieces and then patched together with other souls. Is it this soul destruction process that causes the amnesia? How are we able to continuously repeat the same life if our souls are being destroyed every time, we go through the BLA, the Between Lives Area?

MY COMMENT: I would say it's the density range of this Kenoma (12 Heavens, including the Underworld) that creates the amnesia. This is why the height of amnesia is within the super-dense homo sapiens sapiens body. We enter it with complete amnesia. Then, when we die, we gradually start remembering a little more and have greater insight. But still, we can only regain so much while being anywhere in the astral/Kenoma. But the trauma in the Recycling Center certainly contributes to the amnesia—we know that trauma creates amnesia.

Regarding the splitting of souls, it's information coming from research I conducted, and sources I had during the Wes Penre Papers³ period. In addition, it stems from the remote viewing team led by Brett Stuart, resulting in their "Moksha" video⁴, and also from various independent channeled material, including Barbara Marciniak's "Pleiadians."

If, after death, you would go into the tunnel of light and thus, into the Recycling Center, your soul will apparently be split. Some of it will be used by the Archontic System to keep the energy going (see the Moksha video), others will, from what it seems, merge with other souls' energy, but the major part of you will still be intact as "you." The "you" will then be shot back with technology into a body on Earth, and you will repeat the same movie/lifetime as last time, but you have your 3-D limited choices to make changes to the movie—it's interactive. It's the Kenoma version of "evolution," and for some it's de-evolution, depending on what choices we make. I can imagine it's done this way to keep us longer here in the Kenoma, so we don't graduate too fast. It's in the interest of those in control to keep us here as long as possible because we are their batteries. If they can't recharge us and use our energy, they will soon have no energy of their own to maintain their existence. They need to feed on us. They want our souls, and they want our bodies.
